

## *Superior Hardware and Software Asset Management*

### LicenseWatch SMS Option

The LicenseWatch SMS Option connects directly to Microsoft System Management Server. All software and hardware data from the System Management Server are accessible via the LicenseWatch console.

LicenseWatch SMS Option consists of the LicenseWatch Framework and five feature rich modules, this enables the user to customize the solution to fit precisely the companies needs.

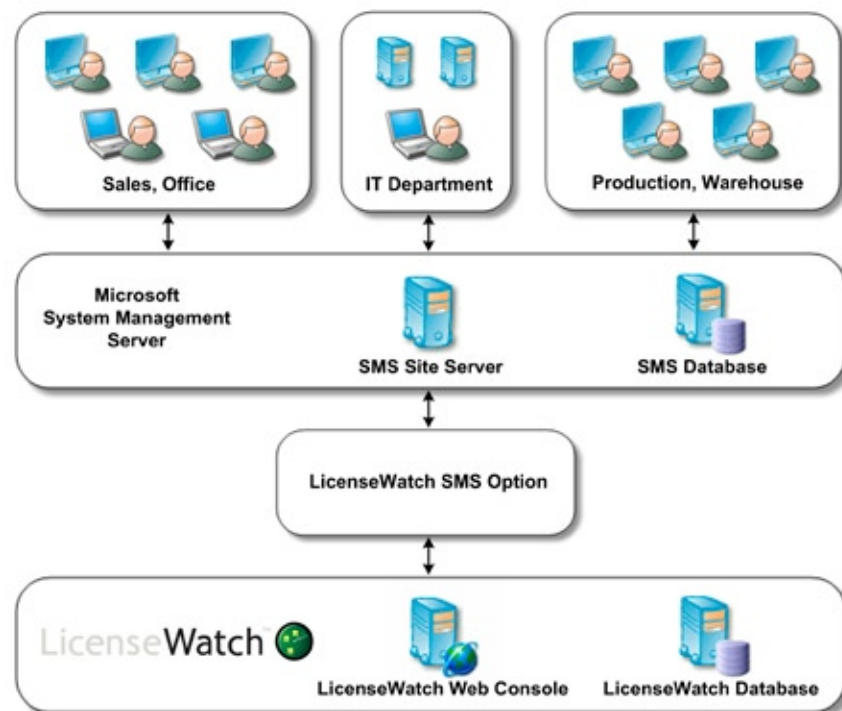

- LicenseWatch Framework
- LicenseWatch Software License Manager
- LicenseWatch Metering Passive
- LicenseWatch Integration for Active Directory
- LicenseWatch Advanced IT Asset Management
- LicenseWatch Notification

LicenseWatch SMS Option works 100% the same way as the LicenseWatch version running with the LicenseWatch agent. In fact the LicenseWatch technology enables customers to run with different types of agents (LicenseWatch agents and Microsoft System Management Agents). This feature is very useful in environments where some of the organisations desktops runs the SMS agent and a small number of workstations on very thin bandwidth network use LicenseWatch agents (LicenseWatch agents have the smallest footprint among any client/server based Software Asset Management solutions.\*

\* LicenseWatch Agent uses less than 200KB of space and has a 3-5% footprint when scanning for software and hardware.

All software and hardware data from the SMS SQL Server are replicated to the LicenseWatch SQL Server. From the LicenseWatch console, administrators are able to control any of the data collected from SMS. LicenseWatch SMS Option functionality includes:

- Industry leading compliance reporting on any organisational level.
- Software metering analysis.
- Most advanced software registration on the market.
- Hardware assets replicated directly from SMS SQL Server.
- Fully integrated with Active Directory.
- Advanced alarm functionality.

The IT department is on constant pressure to deliver more with fewer resources. Maintaining the companies total IT assets can be a challenging task without streamlined processes, technology and manpower to do the job.

LicenseWatch Software Asset Management Suite consists of the LicenseWatch Framework and 5 powerful modules which enable the user to customize the solution so fit precisely to the needs both now and in the future. This makes LicenseWatch among the most versatile software asset management offerings on the market, regardless of the number of workstations.
